3.	Acceptance Testing	14

1. Introduction

Scott County is developing a Traffic Management System (TMS) to address transportation safety and mobility challenges associated with event oriented traffic around the interchange of County Road (CR) 83 and US Highway (Hwy) 169 within the City of Shakopee. The management of traffic in this area involves transportation agencies at the city, county and state levels, as well as local law enforcement and businesses that generate traffic for large events. The goal of this project is to actively manage traffic and provide real-time alternate route information to travelers in order to balance traffic in the project area during events, thus reducing safety and mobility issues.

A concept of operations has been prepared to identify challenges with the current situation and to develop corresponding needs. The needs were identified by Scott County key stakeholders and documents relevant to the project. System requirements have also been developed to further identify how the stakeholder needs have been correlated with requirements that describe what the TMS must do as the basis for further design, procurement, installation, testing and operation. This document now presents a validation plan that will be used during the design and construction stages of this project to confirm that the system is procured, installed and operating as specified by the system requirements.

Testing is necessary to ensure system requirements are met. For this project, testing will be done on two levels. First, verification testing will be conducted on system components as they are identified for procurement and incorporated into design. This will confirm that available products meet specified requirements and it will be performed primarily through document review before the system is procured. Once procured and system integration is complete, additional testing verifies that the components have been successfully integrated before they are installed. Acceptance testing is the second level of validation for this project and it will take place after the initial system components are installed. System acceptance will confirm that the products fulfill their intended use and it will be completed when the system is in its operational environment to allow for demonstrations as the primary form of testing. Once the initial installation is accepted, all remaining installation may proceed.

Scott County will oversee all verification and acceptance testing, some of which will be led by the Design Contractor and others by the Construction Contractor(s). Five test cases are suggested for this project:

Verification Testing

- 1. Product Specification Review
- 2. Plan Set Review
- 3. Integration Demonstration

Acceptance Testing

- 4. Functional Demonstration (1-Day)
- 5. Reliability Demonstration (30-Day)

For each test case, a recommended test environment is noted. Test procedures and validation instructions then describe which system components will be inspected or demonstrated to verify the corresponding system requirements. The test procedures also identify who will lead and recommend who should participate in each test case. Some system components will be validated at more than one point and are noted as such in the validation instructions. Test log details are also included to use during

testing as formal documentation of whether the system passed or failed to meet requirements. Comments about each validation step should be entered in the log with enough detail for the Contractor(s) to make product, design or installation modifications as needed.

2. Verification Testing

Components for the TMS will be procured according to the system requirements and final design specifications approved by Scott County. Verification testing will occur as the components are identified for procurement to ensure requirements are met. Any items failed during verification testing will be corrected and then presented again to Scott County for final approval. Once this stage of testing is completed and approved by Scott County, procurement may proceed. Each product should also be accompanied by manufacturer documentation of successful Factory Acceptance Testing prior to shipping. The following tables present three test cases, environment, procedures, verification instructions, relevant system requirements and logs that will be used for verification testing.

Test Case 1: Product Specification Review

Environment: Office or Factory / Warehouse

Procedure: As system components are identified and assessed prior to procurement, the Design Contractor and Scott County will review product specifications for requirements verification and approval. Once approved, procurement may proceed. *Most steps described in the validation instructions below will be repeated during Test Case 4. The test log has been separated to reflect multiple instances of testing.*

Participants: This test case will be led by the Design Contractor, with participation from Scott County.

	Suntam		Test Log	
Validation Instructions	System Requirement	Pass/ Fail	Comments	
1a. Confirm that control software is	1.1		Test Case 1 Results	
accessible via a standard Internet browser. In Test Case 4, browser				
should be opened and software			Test Case 4 Results	
accessed via designated URL.				
1b. Confirm that control software is a	1.2		Test Case 1 Results	
multi-user software. In Test Case 4, five or more users should access the				
software simultaneously.			Test Case 4 Results	
1c. Confirm that control software and	1.3		Test Case 1 Results	
databases are accessible to users 24/7/365. In Test Case 4, users				
should access software during a			Test Case 4 Results	
variety of times/days of the week.				
1d. Confirm that control software is	1.4		Test Case 1 Results	
compatible with Red Hat Enterprise Linux.				

1e. Confirm that control software is	1.5	Test Case 1 Results
compatible with PostgreSQL	1.5	Test Case 1 Results
database management.		
1f. Confirm that control software is	1.6, 1.7	Test Case 1 Results
accessible to users with authorized	1.0, 1.7	Test Case 1 Nesuits
LAN access via desktop and		
portable computers. In Test Case 4,		
users should access software from		Test Case 4 Results
both desktop and portable		
computers.		
1g. Confirm that control software is	1.8	Test Case 1 Results
accessible to authorized users via	1.0	rest case I Results
virtual private network (VPN)		
access. In Test Case 4, users should		Test Case 4 Results
access software from outside the		
Scott County firewall.		
1h. Confirm that control software allows	1.9	Test Case 1 Results
authorized users to perform	,	1 200 200 2 1120 2010
concurrent operation. In Test Case		
4, two or more users should perform		Test Case 4 Results
operations concurrently.		
1i. Confirm that control software uses	1.11, 2.7, 4.9	Test Case 1 Results
fiber to communicate with field	1.11, 2.7, 4.3	rest case 1 Results
devices. In Test Case 4, control		
software should be connected to		Test Case 4 Results
cameras and DMS via fiber.

alerts.		Test Case 4 Results	

Test Case 2: Plan Set Review

Environment: Scott County (or City of Shakopee) Meeting Room

Procedure: After detailed design is complete, Scott County will review with the Design Contractor a completed plan set for the system installation to validate requirements and approve. Once approved, procurement may proceed. Review and approval of plan sets will occur in preparation for a bid letting that will procure equipment for the integration demonstration. This test case emphasizes the need for all plans to be reviewed and approved prior to field installation of equipment. All of the validation steps in this test case will be repeated in Test Case 4. The test log has been separated to reflect both instances of testing.

Participants: This test case will be led by the Design Contractor and should include, at a minimum, Scott County, City of Shakopee Public Works, Minnesota Department of Transportation (MnDOT), and Shakopee Mdewakanton Sioux Community (SMSC). Additional participants may include Shakopee Police Department, Canterbury Park, Mystic Lake Casino and Valleyfair.

Test Case 3: Integration Demonstration

Environment: Scott County (or City of Shakopee) Facility

Procedure: Once the system components have been procured and integrated, the Construction Contractor(s) will demonstrate the system integration for Scott County and Shakopee Police Department prior to initial installation. The demonstration will take place at a Scott County (or City of Shakopee) facility to simulate the installation environment. The Construction Contractor(s) will integrate at least one DMS, at least one CCTV and the corresponding control software. All system features (e.g. posting DMS messages, moving CCTV) should be activated and observed for requirements validation and approval during the demonstration. Once approved, the remaining integration may proceed. All of the validation steps in this test case will be repeated in Test Case 4. The test log has been separated to reflect both instances of testing.

Participants: This test case will be led by the Construction Contractor(s) and should include, at a minimum, Scott County, and Shakopee Police Department. Additional participants may include MnDOT, SMSC, Canterbury Park, Mystic Lake Casino and Valleyfair.

 Device identification number Geographic location of device by latitude and longitude 		Test Case 4 Results
 Date and time stamp of last TMS communication with device Device operational status according to active operational plan 		Test case 4 Results
3k. Confirm that control software allows users with the first and	1.30	Test Case 3 Results
second highest levels of operating privileges to click on a device to access its control functions.		Test Case 4 Results
31. Confirm that control software allows creation of operational plans that specify device actions (e.g. messages posted to DMS, email	1.31	Test Case 3 Results
alerts, signal timing plans) based on conditions that warrant use of the system.		Test Case 4 Results
3m. Confirm that control software allows users with the first highest	1.32, 1.33, 1.34, 1.35	Test Case 3 Results
level of operating privileges to create, modify, activate and deactivate operational plans.		Test Case 4 Results
3n. Confirm that control software	1.36	Test Case 3 Results

maintains a record of operational plan activations and deactivations according to user identities for a minimum of 365 days. Activate/deactivate a series of operational plans to confirm that a record is created and check for settings associated with how long		Test Case 4 Results
records are retained.		
3o. Confirm that control software interfaces with MnDOT IRIS to display snapshot images, in view-	2.1, 2.2	Test Case 3 Results
only mode, from MnDOT-operated CCTV.		Test Case 4 Results
3p. Confirm that control software interfaces with MnDOT IRIS to	4.1, 4.2	Test Case 3 Results
display messages, in view-only mode, posted on MnDOT-operated DMS.		Test Case 4 Results

3. Acceptance Testing

This stage of testing will include a functional (1-day) test and a reliability (30-day) test to be conducted at the initial installation. The functional test will be conducted to demonstrate that all system requirements are adequately met. For the remaining installation, reliability tests will be conducted to validate that the systems are properly installed and operate as required. The following tables present two test cases, environment, procedures, validation instructions, relevant system requirements and log that will be used for system acceptance testing.

Test Case 4: Functional Demonstration (1-Day)

Environment: Installation Sites

Procedure: Once the installation is complete, the Construction Contractor(s) will schedule 1-day functional demonstration to allow for Scott County observation under dawn/dusk lighting and peak/off-peak traffic conditions. The demonstration will require at least one vehicle to drive around the installation sites and observe component activations for requirements validation and approval. Authorized access from computers at Scott County, Shakopee Police Department and MnDOT will be required to operate and observe control software performance for validation and approval. Authorized access from computers at SMSC, Canterbury Park, Mystic Lake Casino and Valleyfair will also be required to confirm observational access to control software. All of the validation steps in this test case will be conducted first in Test Case 1, Test Case 2 or Test Case 3. The instructions and test log have been included in the previous test cases respectively to reflect the multiple instances of testing.

Participants: This test case will be led by the Construction Contractor(s) and should include Scott County, City of Shakopee Public Works, Shakopee Police Department, SMSC, MnDOT, Canterbury Park, Mystic Lake Casino, and Valleyfair.

Validation Instructions

- 4a. Repeat validation steps 1a-1c, 1f-1i, 1m-1n, 1p-1t, 1v-1y, 1cc, 1gg-1ii, 1mm-1nn, 1rr, 1tt-1ww, and 1yy-1bbb as described in Test Case 1. Record results in test log also provided under Test Case 1
- 4b. **Repeat ALL validation steps** as described in Test Case 2. Record results in test log also provided under Test Case 2.
- 4c. **Repeat ALL validation steps** as described in Test Case 3. Record results in test log also provided under Test Case 3.

Test Case 5: Reliability Demonstration (30-Day)

Environment: Installation Sites

Procedure: Following completion of Test Case 4, Scott County and Shakopee Police Department will continue operation of the system for another 30 days to demonstrate reliability and validate the associated requirements. During this period, signs may be covered and unavailable for driver interaction. Each day Scott County and Shakopee Police Department will validate default operation of all DMS, all CCTV and the corresponding control software. Scott County and Shakopee Police Department will also activate at least one operational plan to validate the prescribed operation of all DMS, all CCTV and the corresponding control software. All of the validation steps in this test case have been conducted in previous test cases. Because these steps must be completed each day for 30 days, the instructions and test log entries are provided to accommodate documentation of pass/fail status for each day.

Participants: This test case will be led by Scott County with participation from Shakopee Police Department, MnDOT and the Construction Contractor(s). Scott County may lead testing during routine business hour and Shakopee Police Department may lead in the off hours.
